 - The game is also split in different level, making player to challenge different stages of enemy.
 - + *Features used* - Java, Android, SQLite database
- **PasswordStrengthPredictor** [\[Github Link\]](#)
 - Made a NLP and ML model, to predict the strength of passwords, which are given in csv dataset.
 - Used nltk library for NLP and numpy, pandas module for preprocessing purpose.
 - + *Features used* - Python(numpy, pandas, seaborn library), Logistic Regression, Jupiter Notebook
- **Tabular-ML** [\[Github Link\]](#)
 - Built an end-to-end ML system for tabular datasets.
 - Took a sample titanic event dataset and from the tabular dataset predicted the how many childrens,, mens, womens, captains, etc. got rescued and how many died and injured.
 - Used the Python packages like numpy, random, pandas, seaborn, matplotlib.pyplot, etc. and we accordingly trained the data and tested also.
