## PROJECTS

- **CaveMan - The Saviour** [\[Github Link\]](#)
  - A 2D physics-based game app created with Android Studio and with simple graphics.
  - It is an enemy killing game, where player has to reach the winning score by killing the enemies.
  - The game is also split in different level, making player to challenge different stages of enemy.
  - + *Features used* - Java, Android, Sqlite database
- **PasswordStrengthPredictor** [\[Github Link\]](#)
  - Made a NLP and ML model, to predict the strength of passwords, which are given in csv dataset.
  - Used nltk library for NLP and numpy, pandas module for preprocessing purpose.
  - + *Features used* - Python(numpy, pandas, seaborn library), Logistic Regression, Jupiter Notebook
- **Tabular-ML** [\[Github Link\]](#)
  - Built an end-to-end ML system for tabular datasets.
  - Took a sample titanic event dataset and from the tabular dataset predicted the how many childrens,, mens, womens, captains, etc. got rescued and how many died and injured.
  - Used the Python packages like numpy, random, pandas, seaborn, matplotlib.pyplot, etc. and we accordingly trained the data and tested also.
